

How "up" does your iSeries need to be?

Everyone agrees that IT availability is critical to business success, but, are you utilizing the right solutions and practices to achieve that goal? The IBM eServer iSeries has many availability technologies that can provide your business with a significant edge. Want to learn more on how iSeries availability technologies can help your business?

Come join us at the IBM ***Building Your iSeries Availability Plan*** seminar and learn about the creating an iSeries availability solution to meet your needs. Topics to be discussed include:

- ✓ **Addressing the challenges of availability in your business**
- ✓ **Evaluating the technologies and solutions for Continuous Availability**
- ✓ **Integrated iSeries and SAN storage availability technologies**
- ✓ **iSeries in the business continuity environment**
- ✓ **Maximizing the availability of a single iSeries or AS/400**
- ✓ **Techniques for your recovery plan**
- ✓ **Best practices for availability**
- ✓ **Understanding your next steps!**

IT Executives will find the session ideal for understanding how iSeries Availability Technologies will help their business. IT Managers, Staff, and Technology Analysts will find the day helpful in planning an iSeries Continuous Availability environment for their business.

Building Your iSeries Availability Plan

***Come learn how to gain a competitive edge and...
get your nights and weekends back!***

Building Your iSeries Availability Plan Seminar

Are you exploring the appropriate iSeries® availability technologies s are available to you? Are you trying to decide which availability technologies will best fit your business needs? Wondering how they work?

The Building Your iSeries Availability Plan seminar is designed to assist you with developing a solution to meet your business needs for increased availability on the iSeries including planning for 24 x 365, customer and end user availability requirements. It will provide an overview of iSeries tools, techniques, and disciplines, including clusters, LPAR, backup and recovery techniques, and system management processes that most efficiently address server availability factors.

This seminar will provide you with an update of the latest hardware, operating system, Integrated iSeries and SAN storage solutions, software, and Business Partner technologies that help increase iSeries availability. Emphasis is placed on using tools, products, and techniques to build a solution that is strategically in line with future directions.

Topics on the agenda:

- ▶ The Value of Availability and its Challenges
- ▶ Increasing the availability of a single iSeries server
- ▶ Technologies for multiple servers
