

STORAGE MANAGEMENT STUDY

Get control of your storage assets, before they get control of your budget...

Data growth has increasingly become one of the most difficult challenges to manage in today's modern data centers. Administrators are asked to manage more data with existing tools and less time. New industry regulations on data availability escalate the importance of data protection and disaster recovery.

Yorel's storage management study is designed to provide our customers with a clear roadmap of how to effectively address these storage challenges while **saving time** and **reducing costs**.

Process:

- Yorel's agentless data collection tools will inventory your storage assets
- Storage utilizations will be monitored and collected for 7 days
- We will analyze the data to determine how the storage resources are currently utilized in the organization
- We will project the data to determine trends and to gauge future storage growth and requirements
- We will formulate a roadmap for storage consolidation, data management, and data protection
- Yorel will develop a custom implementation strategy based upon the proposed storage roadmap

Deliverables:

- Executive summary reviewing the current storage environment
- Comprehensive storage management roadmap
- Detailed analysis of customer's current and future storage strategy

Additional Options:

The storage management study can be customized to emphasize any of the following areas of focus:

- Data Security
- Data Protection
- Disaster Recovery
- Storage Consolidation
- Capacity Management
- Performance Optimization
- Information Lifecycle Management
- Hierarchical Storage Management
